Microbial Risk Management
During Cleanroom Operations
Overview

This course will provide an understanding of the Risk Management of Contamination (RMC) system that can be utilised for the control of contamination during manufacturing operations in cleanrooms.

All general sources of cleanroom contamination, their routes of transfer and the associated control methods will be discussed and a method of assessing their risks to product explained.

50% of the course will be spent in lectures and the remainder will be spent performing practical exercises and in interactive workshops.

Course Objectives & Learning Outcomes

- Delegates will be able to identify the sources of contamination, routes of transfer to the product and contamination control measures and apply this in their facility.
- The course will provide a scientific assessment of the fundamental mechanism of contamination transfer, via surface contact or from airborne deposition, and how this mechanism is used to provide the most accurate methods of assessing risk of microbial contamination of product.
- Delegates will recognise how the identified risks, or their methods of control can be monitored and limits set to ensure that contamination is adequately controlled are outlined.
- Delegates will recognise the advantages of using a quantitative system to assess and prioritise risk based on actual process data.
- Methods of periodic verification that the contamination system is under control will be presented.
- Delegates will participate in risk assessment workshops lead by industry experts to enhance learning and facilitate debate.
- Methodology will be presented to determine the microbial risk to patient from aseptically prepared products.

Who Should Attend?

The course is suitable for all personnel involved in the management and operation of cleanrooms including:

- Production Managers and Supervisors,
- Quality Assurance,
- Microbiologists,
- Sterility
MICROBIAL RISK MANAGEMENT DURING CLEANROOM OPERATIONS

Course Programme

Day One

Day Two
Level 3 RA for Critical Area Contamination, Airborne Deposition, Level 3 RA for Critical Area Contamination, Surface Contact, Level 3 RA for Critical Area Contamination, Surface Contact, Establishing an Effective Monitoring Programme, Regular Verification of the Risk System, Documentation and Staff Training, Assessing Microbial Risk to Patients from Aseptically Manufactured Products, Calculation of Risk to Patients.

In partnership with Teesside University, the Honeyman Group has introduced the professional qualification Accredited Specialist. Candidates completing the UCPD option in this course are able to demonstrate technical expertise and competency through a formal qualification.

All courses can be booked online:

- Cleanrooms: Principles in Practice®
- Pharmaceutical Water Systems
- Microbiology for Non-Microbiologists
- Sterile Product Manufacture
- Cleaning Validation
- Pharmaceutical Sterilisation
- Microbial Risk Management In Cleanroom Operations
- Biotechnology: Principles in Practice®
